

## Dehumidifier Floater Connection

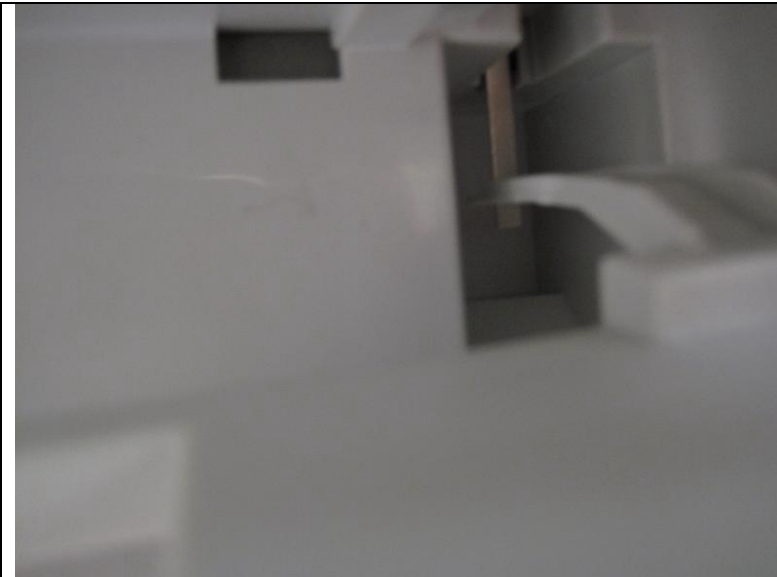

This is the dehumidifier water tank. In the back right corner you can see the floater mechanism.

This is the arm of the floater. When the tank is properly inserted into the tank cavity, this arm will depress the metallic lever in the back upper right portion of the water tank cavity. Please make sure that this arm is not damaged.

This is the floater depressing the metallic lever. I have removed the water tank to allow space to take a photograph. The arm of the floater presses the lever back.

This is another view of the arm of the floater depressing the metallic lever.
